RE: Notice of Patent Infringement — U.S. Patent No. 10,842,117 (Industrial Sensor Calibration Method)

Dear Mr. Voss,

This letter follows our correspondence of January 2026 and serves as formal notice that Meridian Dynamics, Inc. considers Vantage Systems' industrial-sensor product line to be in continued infringement of U.S. Patent No. 10,842,117, held by Meridian Dynamics since 2019. Our prior correspondence requested a licensing discussion in good faith; to date, Vantage Systems has not responded substantively to that request.

Meridian Dynamics' technical review of publicly available product documentation for Vantage's industrial-sensor line indicates the calibration method employed reads directly on Claims 1, 4, and 7 of the referenced patent. We estimate that Vantage's continued sale of the affected product line since the priority date constitutes ongoing and willful infringement, given the January notice already provided to your organization.

Accordingly, Meridian Dynamics demands the following within thirty (30) days of this letter:

1. Written confirmation of Vantage Systems' intent to enter licensing negotiations in good faith, or, in the alternative, a substantive response disputing infringement with supporting technical basis.
2. An accounting of units sold and revenue attributable to the affected product line since the priority date.
3. Cessation of further infringement pending resolution, or agreement to an interim royalty arrangement.

Failure to respond substantively within the stated period will be treated as a refusal to negotiate in good faith, and Meridian Dynamics will proceed with litigation to protect its intellectual property rights, including a claim for enhanced damages given the prior notice already on record.

Sincerely,

S. Okonkwo-Reyes
General Counsel
Meridian Dynamics, Inc.

This communication references a prior notice of January 2026 and is intended for licensing discussion purposes.
